

Quality Assurance Engineer

Zug, Switzerland

The Role

A new exclusive role to Eled where you will gain the opportunity to work alongside different departments and develop your career within QA.

A great opportunity to work within the operational side of quality assurance, where you will develop expertise across the full life cycle. You will work closely with all departments from R&D and regulatory affairs, allowing to develop good cross functional relationships. You will be joining a growing medical device company, with great prospects for your own future development and career growth.

As the quality assurance engineer your responsibilities will include but not limited to:

- Ensuring successful compliance with the QMS.
- Working closely with management and other departments ensure quality standards are met.
- Provide key expertise within the CAPA process, and managing deviations through to completion.
- Handle non-conformities and initiate any corrective actions.
- Provide key support in validation projects.
- Be a key member and support within both internal and external audits.

Your qualifications

You will be a great fit for this role if you have the following:

- A few years of experience within quality assurance for medical devices.
- Good experience within operational quality assurance related tasks.
- Good working knowledge of ISO 13485.
- Good full life cycle knowledge, from design through to CAPA and PMS activities.
- Excellent communication skills in English.

If you are looking for your next career step and for an opportunity to learn, ensure you apply today to find out more about this unique opportunity.
