

# HEAD OF INDUSTRIAL/ MANUFACTURING QUALITY

*Paris, France*

## *The company*

Come and join a leading global IVD manufacturer as  
Responsible for Industrial Quality

This fast-growing company is all about the language of life. Through their diagnostic products, they translate what's going on in the body into an understandable language for people. This company is now investing heavily into market expansion and product development to increase their ever expanding product portfolio of software, instruments and reagents (IVD devices). With their eye on the future, they are ramping up activities in production. They are looking for you to join their quality department and help change the future!

## *The role*

We are looking for a quality professional with experience in operations/manufacturing/industrialization to step into this newly created role. If you are the kind of person who sees beauty in complexity, challenges instead of obstacles and enjoys being hands-on this is the perfect position for you!

As head of industrial quality you will

- Be the key strategic quality partner to the company's operations and head of production, managing all processes in the quality system relating to these activities
- Lead quality activities related to: production, product quality, supplier quality, subcontractors, etc
- Improve and upgrade the QMS with a particular focus on processes relating to operations and industrialisation
- Effectively communicate and advocate for the company's overall business strategy
- Define and continuously improve QMS documentation relating to quality operations and industrialisation
- Look for opportunities for continuous process improvement and communicate them to leadership
- Contribute to internal and 3rd party audits
- Work cross-collaboratively with other departments: marketing, R&D, quality, regulatory, technical
- Monitor, track and create status reports

## *The requirements*

We are looking for:

- 7+ years experience in quality for medical devices or IVD
- Proven track record specifically in the production/operations area
