LIÈGE, BELGIUM

Quality Logistics Engineer

CLARISSE@ELEMED.EU

Are you an expert in Quality for medical devices? Do you want to define and shape not only new quality processes but also your own role? Are you tired of working in slow-moving corporations where you can't make an impact? Read on, this could be the perfect role for you!

The company

This company has been enhancing performance in healthcare across the world for over 150 years so have a huge amount of history behind it including being the first company to mass-produce dressings for wound care. Even though they have developed and manufactured many revolutionary devices, the innovation doesn't stop and is done in-house!

They are always looking for new ways to improve not just in what they produce but also how they do business so have recently undergone a huge business transformation. The value of work-life balance is also strongly recognised here.

This opportunity is based in Liège where all the logistics to deliver products are done so you will be right in the action. If you are looking for a large, established company that still feels like family, this is the place for you!

Due to a recent transformation in the business, this new position in Logistics was created and we are looking for you! If you're ready for a new challenge that you can mould and shape to fit you, this is the position for you.

This is an opportunity to define and implement new processes for the suppliers and distributors of the business whilst training and supporting the development/upskilling of the existing logistic quality team.

You will be liaising with international teams and influencing stakeholders to close the gaps in the process. It's not often that you have the opportunity to transform and influence quality in such a large, established organisation!

Responsibilities

As EMEA Logistics Quality Engineer you will (not an exhaustive list):

- Lead and develop the processes for selecting, onboarding, approving and monitoring suppliers aiming to deliver sustainable performance
- Collaborate with the quality team in the commercial organisation to implement, maintain and continually improve all processes linked to suppliers
- Drive continuous improvement activities for indirect procurement and distribution and interface with key stakeholders and corporate functions to drive process improvements
- Ensure effective agreements are in place with distributors/sales agents compliant with the relevant requirements and that the suppliers consistently distribute products in compliance with the relevant requirements
- Manage internal and supplier audits
- Proactively drive changes, develop and improve the existing quality system requirements for distribution and indirect procurement
- Lead, follow up and action complaints, CAPA and audit findings related to suppliers

Qualifications

- 3+ years of quality assurance experience in the medical device industry relating to suppliers or distributors
- Experience with QMS on the operations side
- Eligibility to live and work in Belgium
